GUEST INTRODUCES NEW FAMILY OF BEAMER™ REMOTE CONTROL SPOTLIGHTS

Nine New Models Are Easy to Install, Built Tough for Reliable Performance at Sea

Marine industry leader Guest has announced a new family of Beamer™ remote control spotlights designed to provide reliable, darkness-piercing performance in the harshest marine conditions. Nine new models light up the night with 1,000,000 candlepower performance that can illuminate vessels, jetties or other obstacles up to one mile away. And thanks to Guest's most durable design ever, boaters will be able to count on their Beamer spotlights to show them the way.

Guest engineers designed the new Beamer spotlights for toughness from the bottom up, beginning with a larger mounting footprint and fortified "neck" bracing. This provides added strength in critical areas and protects against accidental lateral impacts caused by ground tackle, mooring lines, or gear sliding around on deck.

Guest also added improved gaskets and additional external sealing to prevent water intrusion and provide years of reliable service. Heavy conformal epoxy coating is also applied to further protect sensitive internal electronic circuitry against moisture, dirt or corrosion. The entire housing is constructed from marine grade, UV-stabilized Lexan® material designed to withstand extended exposure to sun, salt and moisture. Illumination is provided by rugged, replaceable 100-watt Halogen bulb.

Guest has also designed these new Beamer spotlights for simple installation. New waterproof bullet connectors at the light base and controls make solid, secure connections easier than ever before. Plus, the bullet connectors are arranged in a tapered design for easier routing of wires through railings, T-tops and rigging tubes.

The new Guest Beamer spotlights are available in 12- or 24-volt models with single-wire remote, wireless remote, console or joystick controls to suit a wide variety of vessels. Not only can boaters easily direct light where they need it using the remote control, the light can also be directly manually without damaging the motor. All units are designed to work with existing Guest Beamer spotlight controls, making these new lights an ideal and easy upgrade for boats of all types and sizes.
