MODEL 502-2
24 VDC Spotlight
with joystick control panel

MODEL 503-2
24 VDC Spot/Flood light
with joystick control panel

INSTALLATION AND OPERATION INSTRUCTIONS

IMPORTANT!
READ THESE INSTRUCTIONS BEFORE INSTALLING AND USING THIS PRODUCT.

KEEP THESE INSTRUCTIONS FOR FUTURE REFERENCE.
Description

The GUEST 502-2 Spotlight uses a 100 watt halogen bulb to produce a tightly focused beam which can illuminate objects up to 1 mile away.

The GUEST 503-2 Spot/Flood light uses a revolutionary dual-focus halogen bulb. Select the 100 watt, narrow-beam spotlight for illuminating objects up to 1 mile away or the 55 watt wide-area floodlight for docking and deck lighting.

All Guest Beamer spotlights can rotate 355° and move up and down though an 80° arc. One joystick control panel and 15 feet (4.6M), of control cable is included.

These units are for 24 volt DC use only

</table>

You will also need stranded copper, 2-conductor, 12 gauge (3mm) wire to connect the spotlight and the control panel to 24 volt DC power sources. (Use 10 gauge (5mm) wire if the light will be more than 30 feet (9M) from its power source). Marine grade plywood for backing plate is recommended.
Installation

Mounting the Spotlight

1. Select a flat, smooth surface to mount the light. Be sure that you will have access to the underside of the location, and that you can drill holes there without damaging existing wiring or structures. Avoid locations where lines, anchors, sails or other hazards might cause damage to the light. Mounting the light as far forward or as high as possible can help to reduce reflected glare when the light is in use. It is recommended that you use marine grade plywood for a back-plate.

2. Remove the foam gasket from the base of the light and use it as a template. Note gasket orientation: Front mounting holes are further apart than the rear holes. Mark the location of the four corner holes and the center hole squarely onto the mounting surface with pencil.

3. Drill five 5/16" (7mm) holes through the mounting surface at the marked points.

NOTE: Always wear eye protection when using power tools.

4. Return the foam gasket to the base of the light, making sure that all of the wires exit through the center hole in the gasket.

5. Feed the wires from the base of the light through the center hole in the mounting surface. A small amount of a non-silicone sealant, (such as StarBrite® Boat Caulk #83801), can be applied to where the bolts and the wires penetrate the mounting surface.

6. Place the light on the mounting surface, lens facing forward, and align the 4 holes in the light base and the foam gasket with the 4 corner holes drilled into the mounting surface.
CAUTION!
Silicone based sealants may cause damage to the foam gasket or the base of the light.

7. Fasten the light securely to the mounting surface using four 1/4” diameter (6mm) bolts, large flat washers, lock washers and nuts. Do not over tighten.

8. Install the gray 5-wire (model 502-2) or 6-wire (Model 503-2) cable between the light and the planned location of the control panel. Avoid running the cable across sharp edges or where it may be exposed to extreme heat. If additional cable is needed, see page 7 for ordering information.

Mounting the Control Panel
1. Select a convenient mounting location for the control panel. Be sure that you will have access to the area behind the location, and that you can drill holes there without damaging existing wiring or structures. Do not place the control where it could interfere with the safe operation of the vessel or vehicle. Avoid mounting the control panel on a curved surface, or in a location that would be exposed to direct rain or spray.

2. Use the template on the next page for measurements to make a hole for the control panel.

Control panel mounting cutout
CAUTION: Always wear eye protection when using power tools!
3. Bring the 5-wire (Model 502-2) or 6-wire (Model 503-2) cable coming from the spotlight out through the control panel, and make the connections as shown on pages 4 and 5 for your model light.

4. Feed the spliced cable back into the cutout hole. Test fit the control panel and use a pencil to mark the locations of the two small holes in the panel onto the mounting surface. Remove the control panel, then drill a 3/32” (1mm) pilot hole at each of the marked locations.

5. Apply a small amount of sealant, (such as StarBrite® Boat Caulk #83801), to the back of the control panel face plate. Fit the control panel into the hole, and fasten the control panel onto the surface with two # 8 x 3/4” (2mm x 1.5cm) Phillips pan head self-tapping screws.

**Electrical Connections**

Guest models 502-2 and 502-3 have two types of wiring connections.

They are:

- *Power supply wires* - the larger red (+) and black (−) wires that bring 24 volts DC power to the light and to the control panel.

- *Control Cable wires* - the small wires within a gray casing that carry your commands from the control panel to the light.

<table>
<thead>
<tr>
<th>CAUTION!</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DO NOT CONNECT THE POWER SUPPLY WIRES TO ANY OF THE CONTROL WIRES.</strong></td>
</tr>
<tr>
<td><strong>DO NOT REVERSE THE RED (POSITIVE) AND BLACK (NEGATIVE) POWER WIRES.</strong></td>
</tr>
</tbody>
</table>

These lights require a source of 24 volt DC power that is capable of supplying 10 amps of current. For best results, run two new wires from the red (+) positive and black (−) negative power wires of the light directly to the main 24 volt DC accessory panel. Install fuses as shown in the diagrams on pages 5 and 6. A 10 amp circuit breaker can be installed instead of an in-line 10 amp fuse.

If the light will be less than 30 feet (9M) from its power source, use 12 gauge (3mm) wires. If the distance will be more than 30 feet (9M), use 10 gauge (5mm) wires.
1. Connect Spotlight cable wires to SAME wire colors of provided cable.

2. Connect control wires to SAME wire colors of provided cable.

Note: The blue control wire is not used with Model 502-2.
503-2 Spot/Floodlight Wiring Diagram

1. Connect cable wires from spotlight to SAME wires colors of provided cable.

2. Connect cable control wires to SAME wire colors of provided cable.

Operation

To aim the spotlight light, move the joystick gently in the desired direction. The light can be moved both vertically and horizontally at the same time.

Use the toggle switch to activate the spotlight beam (or the floodlight beam for model 503-2). The light can be moved with the beam switched off.

Precautions
DO NOT look directly into the spotlight or floodlight while it is operating.
DO NOT cover the light with a fabric cover or any other flammable material. Accidental activation may result in a fire hazard.

DO turn the spotlight toward the control station when not in use. If the spotlight is accidentally activated during daylight, the operator will be more likely to notice and turn the spotlight off before draining a battery.
Maintenance:
Under normal conditions, mild detergent and water will be sufficient to keep the spotlight clean. Avoid using caustic chemicals or abrasives as they may damage the housing. No lubrication is necessary.

Replacement Parts (24 volt)
(Available from The Guest Co.

NOTE:THE CONTROL PANELS USED WITH OTHER GUEST MODELS WILL NOT OPERATE THE MODEL 502-2 or 503-2.

Troubleshooting
Under normal use, your Guest Beamer spotlight will provide you with many years of reliable service. If your unit should become damaged by a severe impact, we recommend that you return the unit to our factory for reconditioning.

If an operational problem occurs:
1. Confirm that all fuses are intact. If a fuse has blown, do not replace the fuse until the cause of the problem has been located and corrected. NEVER replace a blown fuse with a higher value fuse.
Troubleshooting (Cont’d.)

2. Confirm that all wiring connections are accurate and that the spotlight is connected to a 24 volt DC power source capable of supplying 10 amps even when other accessories are operating. (See diagrams on pages 4 and 5.)

3. Check wiring connection, corroded crimps, for loose or corroded connections.

MOST PROBLEMS ARE CAUSED BY POOR WIRING CONNECTIONS.

4. If the spotlight does not move or light, remove the 4 bolts that fasten the spotlight onto the mounting surface and gently lift the light until you can see inside its base. Avoid cutting any wires. Inspect the visible wiring for loose or broken connections. If there are signs of water damage, return the spotlight and control to the Guest Service Department with information about how the spotlight was installed. If there are no signs of damage, re-install the spotlight and then replace the control pad.

5. If the spotlight moves properly but does not light, examine the halogen bulb. Replace it if it appears discolored or broken. If the bulb appears normal, test for a faulty relay by listening at the base of the light while someone activates the bulb from the control panel. If no "click" is audible, or if a "chattering" sound is heard, return the spotlight to the Guest Service Department for relay replacement. NOTE: An inadequate power source may cause similar symptoms.

6. If the spotlight does not move in one direction only (that is: up, but not down or left, but not right), and the connections are good, replace the control panel.

7. If the spotlight will not move left or right but operates normally otherwise, listen at the base of the light while someone else moves the joystick to the left and right. If the lower motor makes no sound when it is activated, replace the lower motor.

If your light has a problem that is not described above, return the unit to the Guest Service Department for an inspection. Be sure to include a brief description of the problem, proof of purchase (if requesting warranty service), and your daytime telephone and/or fax number.
LIMITED WARRANTY
For one (1) year from the date of purchase, The Guest Co., Inc. will, at its discretion, repair or replace for the original consumer, free of charge, any part or parts found upon examination by Guest Co., Inc., 95 Research Parkway, Meriden, Connecticut to be defective in material or workmanship or both. All transportation charges under this warranty must be borne by the consumer.

Proof of purchase is required. Proof of purchase must be computerized receipt. Handwritten receipts are not accepted.

THERE IS NO OTHER EXPRESSED WARRANTY. IMPLIED WARRANTIES, INCLUDING THOSE OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED TO ONE YEAR FROM THE DATE OF PURCHASE. THIS IS THE EXCLUSIVE REMEDY AND CONSEQUENTIAL DAMAGES ARE EXCLUDED WHERE PERMITTED BY LAW.

CUSTOMER SERVICE
If you, our customer, have any questions concerning Guest products, parts or warranties, please contact our Service Department Monday through Friday between 9:00 AM and 4:00 PM Eastern Time.
